

Spay/Neuter Highlights

- **No food or water for 24 hours** -- Starting the morning of the surgery
- **Same day discharge**– Outpatient procedure
- **No ketamine** -- Quick recovery from anesthetic
- **Front leg will be shaved** -- For IV catheter placement, hair will grow back in 3-6 weeks
- **Anesthetic monitoring** → Dedicated nurse
→ Oxygen, blood pressure, ECG, temperature
- **Anesthetic delivery system** → Will breathe for your pet and supply oxygen (same as in a human hospital)
- **Anti-pain** – Three types of anti-pain injections will provide pain relief for 24 hours
- **Fluids** -- Your pet will be well hydrated (despite 24 hour fasting)
- **Laser** -- Reduces Pain, Bleeding and Swelling (**PBS**)
- **Oral Anti-pain** – To go home, starts the following day after breakfast
- **E-collar** -- Provided at discharge
- **Inflatable collar** -- Available for purchase if desired
- **Hugs, kisses and personal attention are included!**
